

Cranberries

Sun exposure: For best fruit production, plant in full sun.

Soil: Soil base of peat moss, sand, and bone meal to a depth of 6-8." Does not like clay soil.

Planting: Water down the soil when preparing the bed for planting but do not over-saturate or leave a puddle. Sow plants 2' apart to accommodate runners generated during the first year of growth. Providing this space will create a healthy plant bed and good fruit production.

Fertilizing: Fertilize with a high nitrogen fertilizer in year one.

Watering: Water soil frequently until wet to the touch.

Harvesting: Plants will begin bearing fruit in the second or third year. Harvest fruit in the fall, when the size of a small cherry and a deep red color.
